Portfolio: tharanahasintha.github.io/portfolio

PROFESSIONAL SUMMARY

Software Engineering undergraduate and Software Developer Intern at the Ministry of Finance, Sri Lanka, who designed and developed a live full-stack web application for the Tax Appeals Commission. Hands-on experience in Java, Spring Boot, Hibernate, Vue.js, React.js, microservices architecture, RESTful API development, JWT authentication and MySQL. Strong foundation in object-oriented programming, data structures and algorithms, and Agile software development.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, SQL

Backend Development: Spring Boot, Spring Security, Hibernate, JPA, Maven, RESTful APIs, Microservices Architecture, API Gateway, Eureka Service Discovery, OpenFeign, MVC, Swagger (OpenAPI)

Security: JSON Web Tokens (JWT), OAuth 2.0, Google OAuth, BCrypt, Role-Based Access Control (RBAC), Authentication and Authorization

Frontend Development: Vue.js, React.js, Next.js, HTML5, CSS3, JavaScript

Databases: MySQL, PostgreSQL, Oracle Database, Firebase, Firestore, Database Design

Java Web Technologies: Java SE, Java EE, JSP, Servlets, JDBC, Apache Tomcat

Messaging and Integration: Apache Kafka, Event-Driven Architecture, Inter-Service Communication

Tools and DevOps: Git, GitHub, Docker, Railway, Postman

Engineering Practices: Object-Oriented Programming (OOP), Data Structures and Algorithms, Design Patterns, Software Development Life Cycle (SDLC), Agile, Scrum, API Testing, Debugging

WORK EXPERIENCE

Software Developer Intern | 6 months
Information Technology Management Department (ITMD), Ministry of Finance, Sri Lanka

- Designed and developed the Tax Appeals Management System (TAMS), a live full-stack web application used by the Tax Appeals Commission, Government of Sri Lanka, covering the Vue.js frontend, Spring Boot backend and MySQL database.
- Built microservices with Spring Boot, Hibernate and MySQL, using Eureka service discovery, an API Gateway for routing and OpenFeign for inter-service communication; documented the RESTful APIs with Swagger.
- Implemented JWT authentication and role-based access control (RBAC), including account lockout, password-history enforcement and notification flow for temporary credentials.
- Modelled the appeal workflow across services using saga orchestration and a versioned rules configuration table, and developed hearing scheduling and appeal queue features.
- Performed API testing, debugging and integration of business workflows between application modules.

PROJECTS

Sellestra – Microservices-Based E-Commerce System | 2026 | Individual
Technologies: Java, Spring Boot, Hibernate, Spring Security, JWT, OAuth 2.0, MySQL, REST APIs, API Gateway, Maven

- Designed and developed a microservices e-commerce platform with separate services for authentication, product management, order processing and payments.
- Secured the platform with Spring Security, JWT, BCrypt password hashing and Google OAuth 2.0 sign-in.
- Centralized client traffic through an API Gateway and managed data in MySQL using Hibernate.
- GitHub: github.com/tharanahasintha/Sellestra

Librioo – Full-Stack Library Management System | 2026 | Group Project
Technologies: Spring Boot, React.js, Firebase, Firestore, MySQL, Hibernate, REST APIs, Railway

- **Role:** Backend Developer and Robot Path-Logic Engineer.
- Developed secure RESTful APIs with role-based authentication for managing books, users and borrowing operations.
- Built the path logic for a library assistant robot and integrated the robot with the Spring Boot backend through Firebase (Firestore) for real-time synchronisation.
- Deployed the backend services to Railway; the system is live at librioo.lk.
- Live: librioo.lk | GitHub: github.com/projectlibrioo-source/librioo-system

SmartVoteSL – Online Voting System | 2025 | Individual
Technologies: HTML5, CSS3, JavaScript, Node.js, Firebase Authentication, Firestore, Realtime Database, QR Code API

- Built a voting platform with voter registration, QR code-based authentication and real-time vote counting.
- Created an admin dashboard for candidate management, election monitoring and live analytics.
- GitHub: github.com/tharanahasintha/voteapp

Offline Gmail Clone – Dynamic Email Client | 2025 | Individual
Technologies: Java, JSP, Servlets, JDBC, MySQL, Apache Tomcat, MVC, DAO Pattern

- Implemented inbox, sent mail, drafts and CC/BCC handling using MVC and the DAO design pattern with persistent storage in MySQL through JDBC.
- GitHub: github.com/tharanahasintha/web-project-thmailer

EDUCATION

BEng (Hons) in Software Engineering | 2024 – Present
University of Westminster (IIT), Colombo, Sri Lanka

G.C.E. Advanced Level, Physical Science Stream | 2023
Mahanama College, Colombo

CERTIFICATIONS

- **Industrial / Enterprise Software Development Program**: Java SE, Java EE, Spring Boot, Hibernate, Maven and Python.

LANGUAGES

English (Professional), Sinhala (Native)
